

# Senior Software Engineer - Java

Location: Remote Work

## Roles & Responsibilities

### 1. Java Development:

- Design, develop, and maintain high-quality Java applications.
- Collaborate with cross-functional teams to define, design, and ship new features.

### 2. SpringBoot Expertise:

- Utilize SpringBoot framework for rapid development of robust and scalable backend services.
- Implement and maintain microservices architecture using SpringBoot.

### 3. API Development:

- Design, implement, and maintain RESTful APIs.
- Ensure seamless integration of APIs with various systems and applications.

### 4. AWS Integration:

- Develop and deploy applications on the AWS cloud platform.
- Utilize AWS services such as Lambda, API Gateway, EC2, S3, etc., to build scalable and reliable solutions.

### 5. Database Integration:

- Work with various relational databases.
- Optimize database queries and ensure efficient data storage and retrieval.

### 6. Code Quality and Testing:

- Write clean, maintainable, and efficient code.
- Conduct thorough testing of software applications to ensure high quality.

## Qualifications

- Bachelor's or Master's degree in Computer Science, Engineering, or related field.
- Proven experience as a Java Developer, with a minimum of 4 years in a senior role.
- Strong proficiency in Java and SpringBoot.
- Extensive experience in API development and integration.
- Solid understanding of AWS services and cloud computing.

- Experience with containerization technologies (Docker, Kubernetes) is a plus.
- Familiarity with database design and optimization.
- Excellent problem-solving skills and attention to detail.
- Notice Period: Immediate
